Art Unit: 2662

1. Applicant is requested to provide the status of the co-pending U. S. application recited on page one of the specification.
2. Claims 1-20 are provisionally rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1-20 of copending Application No. 08/847,921. This is a provisional double patenting rejection since the conflicting claims have not in fact been patented.
3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

4. Claims 1-12,16-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Wise et al. Wise et al disclose the computer document audio access and conversion system which allows a user to access information originally formatted for audio/visual interfacing on a computer network via a simple telephone comprising an access system (100 of fig.1)coupled to a TCP/IP network (15 of fig. 1), the TCP/IP network comprising a plurality of nodes, the TCP/IP network providing access to web pages stored on computer systems (18, 19 of fig. 1) coupled to the TCP/IP network, the web pages comprising HTML code that can be transmitted via TCP/IP packets to the access system over

Art Unit: 2662

the TCP/IP network, the access system being able to receive the TCP/IP packets and to parse HTML code into text and non-text portions (line 66, col. 1 through line 64, col. 2); a telephone system (111 of fig. 1) coupling the telephone to the access system for interactive communication with the access system (100 pf fig. 1); a text-to-speech system (113 of fig. 1) associated with the access system for reading at least some of the text to a user of the telephone; wherein the telephone is a touch-tone telephone (lines 52-55, col. 3), and wherein the access system can be provided with commands in the form of DTMF signals (line 66, col. 1 through line 64, col. 2); a speech recognition system responsive to spoken commands from the telephone user and operative to provide operational commands to the access system (lines 49-58, col.2); wherein the access system is responsive to commands from the telephone user for navigating both within a web page and between web pages of the TCP/IP network (250 of fig.2).

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 13-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wise et al in view of Radziewicz et al.

Art Unit: 2662

Wise et al disclose all the claimed subject matter as described in previous paragraph except the steps of predicting a download time for the web page and playing the selected advertisement while downloading the web page. Radziewicz et al disclose a network communications marketing system comprising the steps of predicting a download time for the web page and playing the selected advertisement while downloading the web page (lines 31-339, col. 1; col. 5, line 43 through col. 6, line 12). Therefore, it would have been obvious to one skilled in the art to use the steps of predicting a download time for the web page and playing the selected advertisement while downloading the web page as taught by Radziewicz et al in the system of Wise et al in order to generate network income.
